PERRY'S VEGETABLE PLANTS

Strong, healthy plants with vigorous roots grown specially for us from selected strains of seed. "Hardened off" and ready for transplanting.
Please refer to page 13 for a complete list.

Perry's Policy

Our cover this year features the Perry trademark, which, for over a generation has proclaimed tersely our business aim, "BETTER SEEDS." The word "better" is a significant one, because it means not only selling the best seeds available today, but constantly improving and developing strains for the future.

In addition to seeds, we have sought to make PERRY'S the complete horticultural headquarters for the home gardener, market gardener and florist. To that end we have been diligent in seeking out the newest and most efficient equipment for the varied needs of these groups.

During the years we have always felt our responsibility to be a three-fold one:

FIRST: To sell only the best seeds available and to sell them at a fair price. Never to sacrifice quality for price.

SECOND: To carry as complete a line of seeds as possible that our customers would have the widest choice.

THIRD: To see that every member of our sales force was experienced in the needs of our customers—a man whose judgment and recommendations could be relied upon, and not just a clerk to hand out a packet of seeds.

It has always been our aim to maintain the same integrity and high standard in the quality of seeds as that established by our predecessors, W. W. Rawson Co., and Fottler, Fiske, Rawson Co. This is our policy—and your approval of it is demonstrated by the fact that you have made us

BEET, CROSBY'S IMPROVED EGYPTIAN PERRY'S SPECIAL STRAIN

Where a first early sort is desired, this variety is unequalled. The medium-sized roots, so eagerly sought for, are decidedly attractive in appearance; smooth, free from rootlets, a rich dark red in color, and uniformly round. The flesh is a deep blood-red with slightly lighter zonings, and in texture, crisp and free from any tough fiber. When cooked, it is sweet and tender. Our stock of this superior strain is selected with the greatest care as to color, shape and earliness.

Pkt. 15c., oz. 45c., ¼ lb. \$1.25, lb. \$3.75

SQUASH, YANKEE HYBRID

A fine new Straightneck Summer Squash which will produce twice the quantity of marketable fruits several days earlier than any other variety. Excellent for first planting. Of special value to market growers, but will prove equally popular with the home gardener. Be sure to include this splendid new Squash in your Garden.

Pkt. 25c., oz. \$1.00, ¼ lb. \$3.00

TAMPALA

A vegetable of recent introduction which when it is cooked is served like Spinach. Entire plants, when they have grown to a height of 5 or 6 inches, make delicious greens raw or cooked. If permitted to grow, the plants will attain a height of about 2 feet when branches 4 to 5 inches in length may be gathered. These young stem tips and leaves may be cooked together; the larger stems up to the size of one's little finger, may be separated from the leaves and cooked separately for 8 to 10 minutes as you would cook Asparagus.

Sow out of doors when the ground has become warm. If the entire plant is to be used when small, thin out to 2 inches apart. If the plants are to be allowed to develop, thin out to 18 inches apart.

Pkt. 15c.

A small amount of White Dutch Clover is included. It is free from worthless chaff and dirt. It is high in germination, as tests will prove, and complies with the Massachusetts seed law. Franklin Park is used extensively on lawns of fine homes and large estates, in parks and cemeteries all over New England. Under ordinary conditions, 1 lb. (1 qt.) is sufficient to properly seed 250 to 350 square feet.

$\frac{1}{2}$ lb. 60c., 1 lb. (1 qt.) \$1.15, 5 lbs. \$5.65, 10 lbs. \$11.00, 16 lbs. \$17.40, 32 lbs. (1 bu.) \$34.50, 100 lbs. \$105.00

PERRY'S SHADY SPOT LAWN SEED

There's no better mixture for sowing on the north side of buildings, between houses or under shade trees receiving sunshine less than half the day

Our Shady Spot Lawn Seed is blended from the best grasses possible to obtain for this purpose, only those that grow and flourish under shady conditions in their natural and wild state being used. It is always advisable for those who are seeding down shady places to supply new soil, if possible, especially if large trees are producing the shade, as their roots spread so fast as to quickly exhaust its nourishment. Liberal amounts of fertilizer are as necessary for lawns under shade trees as are plenty of seed and water. Trimming to allow more air and light is frequently helpful.

$\frac{1}{2}$ lb. 60c., 1 lb. \$1.15, 5 lbs. \$5.65, 10 lbs. \$11.00, 25 lbs. (1 bu.) \$27.25, 50 lbs. \$53.00, 100 lbs. \$105.00

PERRY'S BANK and TERRACE MIXTURE

A splendid mixture of varieties with strong, deep-spreading roots of quick growth. Most effectual in binding loose soils, and preventing slopes from being washed out by rains. Blended for adverse conditions and to produce a fine, smooth, velvety sod of a beautiful rich green. Broadcast 50 lbs. of 6-8-2 Fertilizer to each 1000 square feet and rake in lightly. Sow 1 lb. of our Bank and Terrace Mixture to each 250 to 300 square feet and rake again lightly and firm with a roller or the back of a spade. On steep slopes it may be well to sow a quart of seed oats to each 2 lbs. of seed to help temporarily to retain the surface.

PERRY'S SEASHORE LAWN GRASS MIXTURE

Many a lawn along the New England Shore has been grown from this mixture

A rich, green lawn is especially appreciated and desirable at the seashore, but usually conditions are decidedly unfavorable. Sandy soils are benefited by the addition of clayey soil, peat moss and other organic matter resulting from the use of Wizard Brand Cattle and Sheep Manures. Top soil to the depth of 4 inches should be broadcast, as grass will not grow well in pure sand. The grasses used in our Seashore Mixture are adapted to unfavorable conditions, will quickly germinate in the top soil and make strong roots which will reach down into the sand for moisture. In order, however, to keep the seaside lawn in good condition it should be watered liberally each evening and also receive an occasional application of our sterilized Sheep Manure to maintain a supply of quickly available plant food. Sow 1 lb. to every 250 square feet.

$\frac{1}{2}$ lb. 55c., 1 lb. \$1.00, 5 lbs. \$4.90, 10 lbs. \$9.60, 25 lbs. \$23.50

We recommend it highly and suggest when sowing to prepare the soil and fertilize it in the usual way. In order to secure even distribution, divide the seed and broadcast one-half each way of the lawn, allowing 1 lb. to every 150 to 250 square feet.

SOW WINTER RYE AS A COVER CROP

There are hundreds of gardens that can be benefited by a Fall planting of Winter Rye. Sown at the rate of 5 lbs. to a space 40 by 40, raked in and allowed to grow until April, Winter Rye will produce an abundance of roots and foliage that will not only restore fertility to soils but improve them by adding a lot of desirable humus. It is a logical and sensible thing to do because the cost is slight and the gain great. If for no other reason than to keep down a growth of weeds after your vegetables have been harvested, Fall planting of Rye even as late as November would be a logical procedure.

INOCULATION FOR LEGUMES

It is a proven, scientific fact that all legumes thrive only when certain bacteria are present in the soil. Some soils may be entirely without them—these Nitrogen-gatherers. Under such conditions one may fail to get a good "catch" from seed planted. Inoculation of seed with bacteria before planting is, therefore, a sound investment and safe insurance. The cost is slight. We sell the powder form Legume Aid with instructions for use in every package.

Legume-Aid Garden Package. A combination package for inoculating Garden Peas, Beans, Soy Beans, Sweet Peas and Lupines. Enough to treat 5 lbs. of seed 10c.

PERRY'S PRIZE ASTERS

WILT-RESISTANT STRAINS. Wilt most commonly occurs in the hot Midsummer months just as the buds are beginning to open. The plant wilts, the leaves first turn yellow, then brown and curl, finally dying. The remedy is to use Wilt-resistant Strains that have proven so valuable that wherever available we offer them to the exclusion of others. Plants grown from Wilt-resistant Strains are not immune to the disease known as Aster "yellows," which is quite different and is transmitted by insects. However, they are not so susceptible to infection from it as they have a sturdier constitution. Varieties marked with asterisk (*) are Wilt-resistant.

Aster, Improved California Sunshine

A new class, unexcelled for long-stemmed cut flowers with superb lasting qualities. The large blooms (4 to 5 inches across) have full centers, broad, graceful petals daintily plumed and intertwined. They flower from early August, continuing until frost. 1½ to 2 feet.

CABBAGE MAGGOT PROTECTOR

Treated felt pads which protect Cabbage, Cauliflower, Broccoli, Brussels Sprouts, etc. from the Cabbage root maggot, one of the most destructive pests the gardener has to contend with. These pads act as a barrier which repels the fly that lays the eggs of the maggot. Highly recommended by various Agricultural Colleges and Experimental Stations. Pkg. of 24, 10c.; not postpaid.

BIRD SUB-IRRIGATOR

Simplified Sub-Irrigation of Flats

Sub-irrigation is not a new idea. The Bird Sub-Irrigator is a simple and practical application of this principle which has been known for many years. The Bird Sub-Irrigator is a waterproof, fiber resin tray 3/4 of an inch deep, serving as a reservoir in the bottom of the flat. It is filled with crushed stone, screened gravel or cinders to allow free flow of water under the soil.

A small clay pot serves as a watering vent permitting water to flow into the drainage without directly wetting the soil. Capillary action draws the moisture slowly and evenly up into the soil as the seedlings or plants require it, thus helping to control damping off and insuring faster growth, better plants and higher yield.

Made to fit our regularly stocked greenhouse flat, 20x12x3 inches. 10c. each

PLANT STARTER

A Self watering cypress seed flat one foot square elevated in such a manner that a pan of water can be placed beneath it. Moisture is conveyed to the flat by means of a fiber glass wick, one end being placed in the water and the other passed through a hole in the bottom of the flat. A steady supply of water passing up through the wick assures an even supply of moisture at all times. The starter has one removable side making it easy to remove seedlings or rooted cuttings when ready to transplant. Prevents overwatering, damping off, drying out, and shock to seedlings from cold water.

Plant starter equipped with fiber glass wick. \$1.00.

CARBOLA with DDT

Carbola is primarily a powerful disinfectant that kills certain germs by contact which cannot be seen by the naked eye. This germ killer is combined with a snow-white pigment, same as used in all best oil paints. Thus, when Carbola is applied, it kills invisible germs by contact and dries white all in one easy operation. It can be sprayed or brushed on.

Carbola comes in powder form to which only cold water is needed to make a paint.

Carbola powder, just as it comes in the handy, clean packages, also makes an ideal dry disinfectant. The dry dusting method of disinfecting is considered very practical, especially for floors, dropping boards, nests in poultry houses, etc. where moisture is to be avoided.

Carbola comes in powder form, ready to use. Just mix with any water and apply with brush or spray. Will not clog sprayer.

One pound covers 100 square feet. Will not blister, flake or peel off if used as directed.

FRANKLIN PARK LAWN SEED

TRADE MARK REGISTERED

The Best Mixture for Sunny Lawns

Every good lawn begins with good seed. **Franklin Park Lawn Seed** is good seed. It is recognized as a quality mixture for those who want the best. We blend it ourselves fresh every season from heavy, re-cleaned, live seeds of only those grasses known to be adapted to most all of our soils and climate. A small amount of White Dutch Clover is included. It is free from worthless chaff and dirt. It is high in germination, as tests will prove, and complies with the Massachusetts seed law. **Franklin Park** is used extensively on lawns of fine homes and large estates, in parks and cemeteries all over New England. Under ordinary conditions, 1 lb. (1 qt.) is sufficient to properly seed 250 to 350 square feet.

HINTS ON LAWN PREPARATION AND IMPROVEMENT

Probably we receive more requests each season for help in lawn making and improvement than on any other subject connected with gardening, so we print the following information in hopes that it will answer many of them, though we recognize that practically every lawn presents an individual problem.

Nothing can replace thorough preparation—spading deeply to loosen the soil well—raking to free it from refuse of all kinds and to pulverize it finely—careful grading—enriching sufficiently, and seeding with ample amounts of good seed.

Deep spading improves the mechanical condition of the soil, permitting the tiny roots to penetrate deeply, and secure a maximum of soil food and water. It must be finely pulverized to make a good seed bed. Top soil (preferably a sandy loam) should be spread only on properly prepared sub-soil. Rake well to carefully grade, and always uphill on banks and terraces.

If the soil is known to be sour (acid), apply Land Lime to the rough grade and rake in before spreading either fertilizer or lawn seed. As insurance against the injurious grubs of June bugs and Japanese Beetles, dig in also 8 lbs. of Arsenate of Lead to each 1000 square feet. Broadcast at least 25 lbs. of good plant food like Bonemeal or 6-8-2 to each 1000 square feet, especially under trees.

When sowing your seed, be sure you broadcast it evenly. (A Cyclone Seeder will save seed, time and patience on large areas). Roll, if not sticky, with a water

weight roller to settle the seed uniformly and make the lawn smoother and more presentable. On small spaces simply raking will answer. We advise watering at night or early morning—not when the sun shines. Cut the grass frequently with a sharp lawn mower after it first gets about 3 inches high.

The right kind of a lawn is luxuriant and thick and practically free from weeds. Where do weeds in the lawn come from? Only properly sterilized soil is entirely free from weed seeds. Some may come with top-soil brought in, or from composts not thoroughly rotted, others are carried by the wind and birds, but more are sown each year in impure lawn seed. To secure a maximum of good seed we urge you to buy only Perry's high grade lawn mixtures. But when weeds do appear, dig them out promptly. Scatter in small amounts of additional seed where weeds have been extracted. Always keep a package of Lawn Seed on hand for this purpose.

The first work in the Spring on established lawns is the removal of all litter that has collected during the Winter. With the lawn clean, fill in all hollows with good top soil, and scatter fresh lawn seed and fertilize as for new lawns. Then while the ground is still soft, roll with a water-weight roller—one that can quickly be made heavy or light, at will, to meet conditions. The earlier this work can be done, the better. A rolled lawn will be smoother and have a neater appearance, though repeated rollings may be injurious.
